

# LANTERNS

## MATERIALS

- String (about 4 x 3 m packs)
- Adhesive
- Clean glass jars

**1.** Cut 6 lengths of string, each about 90 cm long. Sear the ends using a lighter to prevent unravelling.

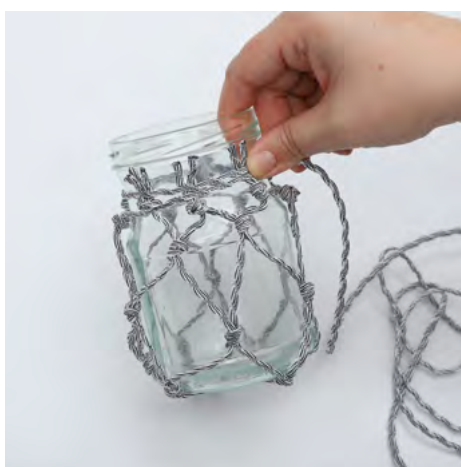

**2.** Fold one length of string in half. Place this on the table in front of you. Fold a second length of string. Tie it around the first as shown in the picture. Repeat using the next 4 lengths of string.

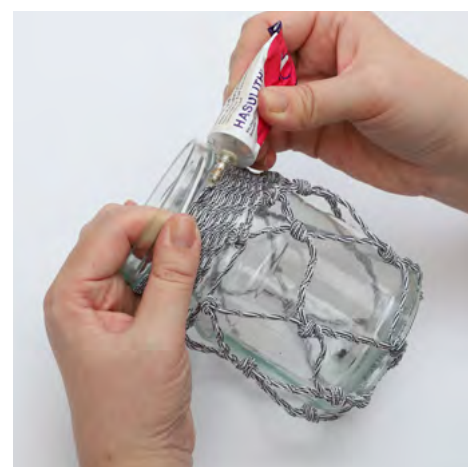

**3.** Bring string ends through the loop. Pull to form a star. The "star" forms the base. Now knot from the bottom of the jar upwards, all the way around it, as shown.

**4.** When the knots reach the top, trim ends. Allow 2 cm of extra string above the last knot.

**5.** Cut a length of string about 170 cm long to wind around the neck of the jar. Tie one end to one of the top knots. Dab a spot of adhesive to glue this knot to the jar while you wind string around the jar neck.

**6.** Wind the string around the jar neck. Dab a spot of adhesive to the end and tuck it in under the wound jar neck.

## LANTERNS

**7.** Cut a length of string about 100 cm long. Tuck the end in under the wound jar neck and secure with a knot. Add a spot of adhesive and hide the end by tucking it in under the wound jar neck. To make a handle, tie the string to the opposite side of the jar neck. Bring it back the other way. Secure. If you need a stronger/thicker handle, you can wind string around these two strings, as follows.

**8.** Cut a length of string about 190 cm long. Tuck the end in under the jar neck. Carefully wind this string around the 2 strings of the handle. Bind tightly to conceal any loose ends. Tie off. Add a spot of adhesive and tuck the ends in under the wound jar neck.
